

# Dual Sided LCD with LED feature

## 23.8" Interior Signage

With its stylish design the dual sided FHD display is a slick way to share content, catching customers coming and going. Left and right edges illuminated by LEDs to ensure maximum visibility. LED feature can be controlled with simple button board, remote control or using a PC via USB. User can change colors, transition between colors and set different transition frequencies. The low power requirements allow the display to stand out just about anywhere. To eliminate dual graphic and multiple PC issues both displays are driven by a single HDMI signal source.

### Features
